

AutoFlower-SuperMix

Organic/Mineral fertilizer

The name says it all: this is a one-component SuperMix, specially formulated for autoflowering plants, with no specific need for longer or shorter daylight periods in order to start their flowering cycle. This type of plant becomes more and more interesting because it produces beautiful flowers from seeds in around 60 days and does not need a whole lot of experience to work with. From a technological point of view it is easier to come to nice results with these type of plants than with plants that are depending on long or short light periods for their flowering cycle. Because Bio Nova stands for new developments, a specially formulated fertilizer was created with these plants in mind, for easiness, simplicity and economy.

AutoFlower-SuperMix works in the same way as the already existing Bio Nova SuperMixes and can just be fitted into our existing schedules. Since the third week, when flowering starts, **PK 13-14** should be combined with Autoflower-SuperMix along the flowering period.

That would be the basics. Of course with Bio Nova we have further options and for more dedicated growers you have **BN Roots** for the first weeks and our boosters **BN X-cel**, **The MissingLink** and our finalizer **VitaSol** make a good team with **Autoflower-SuperMix**. If growing in medium pots, Bio Nova substrates are the perfect choice, our **Coco fiber bricks** or bags or the ready substrate Bio Nova **Soilmix A-Quality**. **Autoflower-SuperMix** has a **NPK** ratio of 7-3-5, a bit different from the other SuperMixes to adapt to the specific needs of the autoflowering plants. The trace elements are also adjusted and the addition of fermented algae guarantees a top result.

This fertilizer consists of:

- Macro elements such as NO_3 , NH_4 , NH_2 , SO_4 , P, K, Ca, Mg and Si.
- Chelated micro elements such as Fe, Mn, Zn, B, Cu and Mo
- Vitalising organic extracts from algae and herbs.

Organic additives to **AutoFlower-SuperMix** like fermented algae and herbs featuring:

- Stimulating of plant's own hormone production and immune system, promoting a lower disease rate.
- Strengthening the root system.
- Cleaning the drip-emitter systems
- Braking down of died off roots in available nutrients.
- Preserving and stimulating beneficial microorganisms.
- Sustainable: usable in recirculation systems.

Your green companion in every way!

AutoFlower-SuperMix

Organic/Mineral fertilizer

All of the elements mentioned above are 100 % pure and free of any profuse ingredients. Therefore this fertilizer is absorbed directly and easily.

AutoFlower-SuperMix enhances an optimal substrat condition, actively stimulates root development and provides as a complete fertilizer for both growing- and floweringperiod.

DOSAGE:

Continuously, mix in 15-33 ml. per 10 liters of water.
In the first week of the growth a small dosage suffices.

Dosage PK 13-14:

start with 15 ml. in the second week and build up to 100 ml. per 10 liters.
In areas with a low calcium-value (soft water) **Ca 15** should be added.
