

# Coco Forte

## Mineral A+B-coconut substrate fertilizer

**Coco Forte A+B** fertilizer is the most simple solution for cultivating on cocofiber slabs. One of the reasons which makes its application so easy is the combination of nutrients for growing and flowering within one product; two bottles/containers is all you need for the entire growth.

This fertilizer is free of excess ingredients and contains only minerals plants are able to absorb directly. In other words: **Coco Forte A+B** is a complete nutrient solution which has the same convenience of synthetic A/B-systems and the quality of the best organic fertilizers.

The basis for **Coco Forte** is **Nutri Forte**. All minerals are of a "Food-Grade"-quality and the trace elements are chelated so that they can be absorbed within a larger pH-range. Especially for the coconut fiber substrate, various elements have been added to this A+B fertilizer, which guarantee an optimal growth and flowering on coconut fiber substrate, in particular in the case of re-use. Make sure that the coconut fiber substrate is free of diseases, plagues or viruses in case of re-use.

The application of these fertilizers is fairly easy and restricts itself to measuring off the proper amounts of A and B and mixing them into the water one at a time. After the mixing, it might be necessary to adjust the pH to 5.8 (5.5-6.5) by means of phosphoric acid.  
*(check the pH-meter once a month by means of the proper pH tester)*

**Coco Forte** is the best coconut fiber substrate fertilizer available on the market today and excels comparable nutrients. Therefore, cultivating with **Coco Forte** leads to excellent results, especially when the other factors (light, air, and plant material) are optimal as well.

### DOSAGE:

10-23 ml. per 10 liters of water.

In the first week of the growth a small dosage suffices.

When you are re-using coconut fiber substrates, it is recommended to first do a EC-measurement to determine the initial dosage.

When the recommended caring products are used, an excellent result is secured.  
**Coco Forte** can be applied to the majority of coconut fiber substrates.
