

FreeFlow

Natural wetting agent

FreeFlow is a natural wetting agent based on Yucca-extract (Sarsaponin Schidegera). **FreeFlow** lowers the surface-tension of liquids, so that they can penetrate more easy in soil, rockwool, coconut and other media. For example, initial soaking of rock wool slabs used to take 24 hours while with **FreeFlow** this only takes only 6 hours.

In case of vermin this product is more effectively than other products. While other products usually only leave behind small drops on the leaf, **FreeFlow** puts a film on the entire leaf which makes pest control more effectively. When you are applying **FreeFlow** to potting soil, you will be able to divide the nutrient solution in the pots or trays much better.

Compostion:

Yucca Schidegera Extract: 98.0%

Instructions:

FreeFlow can be mixed in with liquid fertilizers or pesticides. After mixing some foam may occur but this dissolves by itself over time.

DOSAGE:

Continuously add 3-5 ml. per 10 liters of nutrient solution.

Spraying: 10 ml. per litre of water.

Shake well before use.
