

# MicroMix

## Trace elements solution

### This product contains:

- 3,48% Fe (Iron DTPA)
- 0,68% Mn (Manganese EDTA)
- 0,60% Bo (Boron monohydraat)
- 0,44% Zn (Zinc EDTA)
- 0,17% Cu (Kopper EDTA)
- 0,02% Mo (Molybdene, Natrium Molybdat)

Trace elements are very small amounts of various elements, which are indispensable for a great number of biological processes.

A deficiency of such elements immediately manifests itself in the malfunctioning of a great number of the plant's functions, eventually resulting into all sorts of deficiencies and ultimately the dying off of the plant.

A deficiency of trace elements always manifests itself in the young leaves because the trace elements can no longer be transported within the plant.

This trace elements-mix should be used in order to solve deficiencies or as a basis for a complete nutrient solution.

### DOSAGE:

In case of deficiencies add 2,5-5 ml. per 10 liters of nutrient solution.

In case of a basis for a complete mix continuously add 2,5 ml. per 10 liters of water.

Note that when you are already using one of Bio Nova's main fertilizers it is not necessary to use **MicroMix**.
